## What is Tamanu?

The tamanu tree is a tropical plant that grows in coastal areas and is commonly found in tropical regions. Tamanu trees are medium-sized, reaching 8-20 meters in height. Their leaves are dark green, thick, and shiny, while their flowers are white with a distinctive fragrance.

Tamanu trees have many benefits. Tamanu seeds are used to propagate or cultivate tamanu plants. Tamanu trees themselves are used as water absorbers to maintain groundwater stability in their environment, prevent soil erosion, produce oxygen, and contribute to decarbonization by absorbing carbon emissions.

Tamanu trees, especially their seeds, can produce bioenergy or Nyamplung Crude Oil, a raw material for biodiesel, biofuel, oil, kerosene, LPG, and other fuels such as briquettes.

They can produce oil and sap that can be used as pharmaceuticals (Biopharmaka), particularly as anti-inflammatory agents and for healing new skin wounds. The pulp from pressed tamanu seeds can also be used as an ingredient in animal feed. And so on.

## Our Products

PT. Tamanu Indonesia Gemilang provides various tamanu-based products for domestic and international needs. We supply tamanu plants, both in the form of seedlings (young plants) and mature tamanu trees ready to bear fruit.

Tamanu  
Seedlings

Dried Tamanu  
Seeds and Nuts

In addition to plants, we also supply dried tamanu nuts or seeds that can be planted or directly processed into various products. We also offer peeled tamanu nuts in fresh, wet, and dry forms.

Wet Peeled  
Tamanu Nuts

Dried Peeled  
Tamanu Nuts

Furthermore, we also provide 100% pure tamanu oil, available for direct use in skin care, in 20ml bottles or in bulk quantities for processing into various products.
